

Automatic dispenser

Harbil 400 [HA400]

PRODUCT INFORMATION

- St. steel Twin Ball Valves®
- Dispense speed up to 2L/min
- Shot sizes down to 1/576 fl.oz.
- Up to 32 canisters
- Low Cost of Ownership

The HA400 has been the most popular and reliable automatic dispenser in the market to date. It is the ideal solution for DIY, medium-sized retail outlets and service centers and it is suitable for critical waterborne and solvent-based colorant systems.

The HA400 features the high precision stainless steel Twin Ball Valve® pump (1, 2, 5 or 10 fl.oz.). The new full stainless steel pump is optional. Accuracy (1/576 fl.oz.) and high speed dispensing (up to 2 liter/minute, depending on the colorant) are combined. A fully automatic brushing system (no drying out = no purging!) and centralized automatic bottom stirring are included.

The HA400 can be equipped with a minimum of 12 up to 32 polymeric or stainless steel easy click canisters (3, 6 and 10 liter) and has an electric can table as standard. An electric punch system and a heating set for high viscosity colorants are optional.
