

Automatic dispenser

Harbil 600 [HA600]

PRODUCT INFORMATION

- St. steel Twin Ball Valves®
- Dispense speed up to 2L/min
- Shot sizes down to 1/576 fl.oz.
- Up to 36 canisters
- Low Cost of Ownership

The HA600 is our high volume paint dispenser, ideal for large retail outlets and service centers. It is very suitable for environments with critical waterborne and solvent-based colorant systems.

The HA600 features the high precision stainless steel Twin Ball Valve® pump (1, 2, 5 or 10 fl.oz.). The new full stainless steel pump is optional. Accuracy (1/576 fl.oz.) and high speed dispensing (up to 2 liter/minute, depending on the colorant) are combined. A fully automatic brushing system (no drying out = no purging!) and centralized automatic bottom stirring are included.

The HA600 can be equipped with a minimum of 12 up to 36 polymeric or stainless steel canisters (3, 6, 10 and 20 liter) and has an electric can table. A manual industrial frame is available. Next to this an electric punch system and a heating set for high viscosity colorants are optional.
